Title : Regeneration of Cationites by Electrolytic Method.

Orig Pub : Rev. chim., 1957, 8, No 8, 524-528

Abstract : The regeneration of sulfocarbon was carried out under laboratory conditions in an electrolyser consisting of a vertical glass tube 14 to 16 mm in diameter filled with 19 g of cationite. The Al electrode connected to the negative pole of a direct current source was placed in the bottom part of the tube. The positive pole was connected to an Al plate situated above the cationite mass. The regeneration was performed with a 1.5%-ual  $H_2SO_4$  solution or a 10%-ual NaCl solution, which were placed in a funnel

Regeneration of exhausted by electrolysis. M. Lupan,  
Elvira Vratianu, Ruxandra Sasu, and I. Hergheciu,  
Rev. Chim. (Bucharest) 8, 124-8 (1957). Efficient ion-ex-  
change resins used for water softening are in general difficult  
to regenerate. Tests made with exhausted "Sulfo-carbon"  
type resins showed that a 1-5%  $H_2SO_4$  soln. is more effective  
than a 10%  $NaCl$  soln. By using a simple electrolytic cell  
consisting of an aluminum cathode and graphite anode and  
applying a voltage of 8 v. for the  $H_2SO_4$  and 8-12 v. for the

TITLE: Kinetic study concerning the electrical effects during the ion exchange of  
some granular cationites [Presented at the Republic Chemistry Symposium at Iasi,  
1964]

SOURCE: Revista de chimie, v. 16, no. 1, 1965, 35-39

TOPIC TAGS: ion exchange, chemical kinetics

ABSTRACT: An analysis of  
the kinetic processes occurring during the ion exchange of  
water-softeners of the cation type under the influence of  
voltages of 0 to 90 volts of continuous and alternating  
current. The effect of the voltage in terms of the concen-  
tration of the solution flowing over the cationite is studied  
and compared to the effect with distilled water, and some  
electrokinetic processes and their possible interaction in  
the ion-exchange process are discussed. Orig. art. has: 8 figures. [Based on

 Title : Vascular Conditioned Reflex Studies of Higher Nervous Activity in Young and Old People (Effects of Hormone and Vitamin Therapy on the Old)  
 Orig. Pub. : V sb.: Probl. fiziol. tsentr. nervn. sistemy, M.-L., AN SSSR, 1957, 426-431.  
 Abstract : Vascular conditioned reflexes (CR) to bell and metronome sounds were studied on 15 persons 17-37 years old and on 40 persons 60-92 years old. A relationship between the age of the tested subjects and their ability to develop CR was not found to exist. However, CR was developed in younger and middle-aged subjects after 3-4 combinations, and in older subjects after 9-12 and more combinations. The reaction to an unconditioned stimulus (cold) lasted in older

Title : The Study of the Nutritive Value of the Mulberry Leaves on the Summer Plantation during Different Periods of Vegetation under Conditions of the Continuous Method of Feeding Silk-worms.

Orig Pub : Sb. nauchno-issled. rabot stud. Stavropol'sk. s.-kh. in-t, 1956, vyp. 4, 68-70.

Abstract : There is a positive interrelation between the content of raw protein in the leaves and the output of silk. When feeding the larvae with leaves prepared for the summer rearing (14-22 July), having a 17.76% content of protein, the highest crop of silk was obtained, amounting to 32.6 g. per 0.1 g. of larvae. When feeding larvae with unprepared leaves having a 13.35% protein content, 29.9 g. of silk was obtained.

TITLE: Method of manufacturing colored layers by metal deposition on a substrate in a vacuum. Czechoslovak patent No. 102320

SOURCE: Sklar a keramik, no. 3, 1964, 102

TOPIC TAGS: colored glass, metal sublimation, metal deposition

ABSTRACT: An Author Certificate has been issued for achieving a color effect by the deposition of one or more layers, consisting of a mixture of one or more metals and sulfur, on a colorless glass or plastic substrate in a vacuum. Selenium or tellurium may be used in place of sulfur.

AUTHOR: Vranova, M.; Hamal, K.

TITLE: Anomalous behavior of the susceptibility of a ferrite in the region of the Suhl threshold

SOURCE: Chekhoslovatskiy fizicheskiy zhurnal, v. 14, no. 5, 1964, 376-377

TOPIC TAGS: Suhl effect, Suhl threshold, semiconductor, Landau-Lifshits equation, magnetic field, high frequency magnetic field, magnesium ferrite, nickelous magnesium ferrite, solid state physics, solid state circuitry

ABSTRACT: The amplitude of the alternating magnetization component is usually determined theoretically by solving the Landau-Lifshitz equation. The dependence of the susceptibility on the amplitude of the h-f field can be derived by assuming the existence of higher magnetization modes and taking into account the strong dipole interaction. It holds that  $X''$  is the imaginary part of the diagonal component of the susceptibility tensor at resonance, and  $h$  is the amplitude of the h-f magnetic field strength. Author found an anomaly when measuring polycrystalline nickelous magnesium ferrite.  $X''$  grows and the resonance curve width narrows slightly with increasing amplitude of the h-f magnetic field. The measurements

Card 1/2

ACCESSION NR: AP4038559

were made on a ferrite sample shaped like a ball 2.6 mm in diameter, placed in the middle of a  $TE_{102}$  transmission cavity, at a frequency of 2891 mc. By taking the length of the radio pulse as 2 microseconds and the repeating frequency as 60 cycles, it was assured that the temperature of the sample during measurement did not exceed 80 C. The resonance curve width of this material is 980 oersteds (at  $h = 0.03$ ) and the Curie temperature is 540 C. Orig. art. has: 1 figure.

TITLE: Concise review of investigations of extraterrestrial dust

SOURCE: AN SSSR. Komitet po meteoritam. Meteoritika, no. 24, 1964. Trudy\*  
Desyatoy Meteoritnoy konferentsii v Leningrade 29 maya - 1 iyunya 1962 g., 41-50

TOPIC TAGS: astronomy, upper atmosphere, astrophysics, cosmic dust, extra-  
terrestrial dust, Tungus meteorite

ABSTRACT: The literature on extraterrestrial dust is reviewed, including both the earliest references and the most recently published papers. The paper reviews the problem of cosmic dust discovered in ocean deposits, with particular emphasis on the "Challenger" research, and concludes that the origin of this dust is established. The greater part of the paper deals with atmospheric dust, whose study is greatly complicated by the vast quantities of industrial particles in the atmosphere, even at great heights, which in many cases are difficult to distinguish from dust of extraterrestrial origin. American investigations are cited; on the basis of studies in areas remote from atmospheric contamination by particles of industrial origin it has been found that meteor dust is rather uniformly

Card 1/2

ACCESSION NR: AT4035827

distributed over the earth's surface, creating a uniform background. The origin of these particles by meteor ablation and other mechanisms is discussed. The presence of cosmic dust in the neighborhood of falling of the Tunguska meteorite is discussed. The finding of cosmic dust in deposits of Cenozoic, Mesozoic and Lower Triassic age is noted. The industrial contamination of the atmosphere, making study of atmospheric cosmic dust so difficult, has been complicated further by the products of nuclear explosions. However, at heights greater than 50-60 km there are virtually no particles of terrestrial origin. A table is given showing the great differences in the estimates cited by various authors for the quantity of dust falling annually to the earth's surface. The author suggests establishment of an international organization for study of extraterrestrial dust.
